

STORAGE AND HANDLING PROCEDURES FOR LAMCO BUNDLES

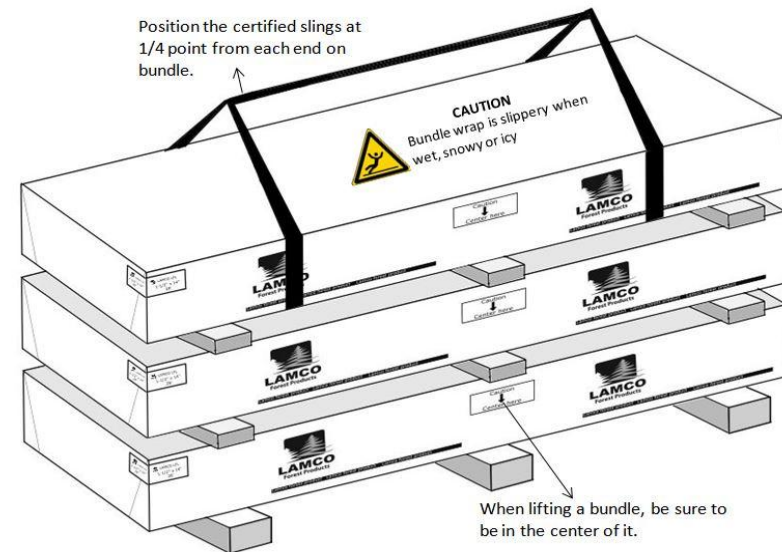

STORAGE

- Bundles must be stored sheltered from weather and in a dry location; indoor if possible.
- LAMCO products are bundle wrapped top, sides & ends for transport and temporary storage outdoors. If original bundle wrap is damaged, repair it with a suitable tape.
- Wrap must remain on the bundle until end use. If opened, rewrap the bundle using original wrapper protecting ends and side bundle. Replace if necessary.
- Store wrapped bundle(s) on perpendicular blocking elevated at least 3 inches above the ground and not in contact with any possible melting snow or standing water.
- Ensure blocking is level and spaced at 6' intervals to prevent deformation of the product.
- When stacking bundles, be sure to align blocking vertically with the one below. Do not stack more than 5 bundles high for safety.

HANDLING

- When handling individual pieces, be sure to handle on-edge and not on flat.
- When lifting a bundle, be sure to lift in the center. Bundles 20 foot and longer have center arrow indicator.
- Do not damage bundles or product with forklifts or cranes.
- When using a crane:
 - Never use unprotected steel cables as these will damage product.
 - Bundle must be intact (strapped) and secure before lifting.
 - Keep the bundle oriented as delivered by the supplier.
 - position the certified slings at 1/4 point from each end of bundle using a spreader bar if necessary.

CAUTION

Walking on wet, snowy, or icy bundles is slippery and will cause bodily harm!

NON-COMPLIANCE WITH PROCEDURES MAY RESULT IN THE TERMINATION OF THE WARRANTY
